set up a reminder "Daily Standup Meeting!!" in this channel at
10AM every weekday, Australian Eastern Daylight Time.

USLACKBOT   2017-03-23 10:00:00
Reminder: Daily Standup Meeting!!

s3613240   2017-03-23 10:01:13
Setting up the basic web server for the API and web server that
will host the front end application (an angular project, or a
regular jquery-powered app)

s3613240   2017-03-23 10:01:39
@jakewestrip What do you want me to use as a JS templating
engine?

jakewestrip   2017-03-23 10:17:27
If we're going with angular we don't really need a templating
engine

s3613240   2017-03-23 10:17:35
Yeah

jakewestrip   2017-03-23 10:17:49
I would say we should use angular but to be honest not sure if
that will make it harder for everyone else to develop

s3613240   2017-03-23 10:18:29
I guess it will take some time to a novice to Angular to wrap their
heads around some of the concepts in Angular

s3613240   2017-03-23 10:19:18
I haven't worked with Angular 2, but I don't think the second
version has addressed the issue of a fairly long learning curve
at all

jakewestrip   2017-03-23 10:20:03
I've only really worked with Angular 1 too

Channels

jakewestrip   2017-03-23 10:21:09
I've been thinking over the last couple of days that maybe JS isn't the best way forward for this project, just considering we need to equally divide programming work and I'm not sure of the others' experience with typescript etc.

jakewestrip   2017-03-23 10:21:28
Basically I don't want any members to have to learn completely new technologies for the project

s3613240   2017-03-23 10:21:59
In that case, I guess it would be easier for everyone to go with Java

jakewestrip   2017-03-23 10:23:15
Although I do personally love web as a platform and have experience with it, it's not really fair for me to base decisions just on my knowledge base

s3613240   2017-03-23 10:24:42
Yeah, I guess we should let the others choose the language they feel most comfortable with

jakewestrip   2017-03-23 10:25:14
Java is always a safe bet since it's used in a lot of the classes at RMIT

s3613240   2017-03-23 10:26:15
Yes, but I'd prefer to build a Swing based Standalone app if we are going with Java. JSP is a little too buggy and overwhelming for me

jakewestrip   2017-03-23 10:27:21
I agree

jakewestrip   2017-03-23 10:28:08
And honestly we don't need to worry about GUI for the immediate time, using Java gives us an opportunity to get functionality fleshed out as a console app first

s3613240   2017-03-23 10:28:51
Yes. @dilanifernando @s3613979-lip guys, is everyone okay with this?

jakewestrip   2017-03-23 10:29:35
I have this slack channel connected on my work pc btw so I'll be here and available all day

s3613240   2017-03-23 10:29:51
Yeah me too

I'm at work right now, but I'll be available on Slack if you need me

s3613979-lip 2017-03-23 10:37:16
Im not really good in Java but it's okay for me. As long as we could finish it on time. It would be alright. ;)

dilanifernando 2017-03-24 02:17:59
I'm also not very good with java, but if everybody else is confident about this, and if we can finish it on time, I am willing to go for it and do my best :)

dilanifernando 2017-03-24 06:54:27
I prefer web based rather than standalone application .. but it's up to you guys .. I'm okay with anything

dilanifernando 2017-03-24 06:58:26
What you're planning to use to create the database ?

dilanifernando 2017-03-24 07:00:06
Btw I may not be able to join your discussion while I am at work .. I will reply as soon as I can

USLACKBOT 2017-03-24 10:00:00
Reminder: Daily Standup Meeting!!

dilanifernando 2017-03-26 16:02:53
Hi guys, for the starters , I just uploaded the class diagram .. please let me of your ideas

s3613240 2017-03-26 16:30:55
A database would make it hard to setup a demo on a different machine if we need to. So I guess we should stick to a regular file on disk to store the data

dilanifernando 2017-03-26 16:40:46
So is it swing based java app with txt file to store data?

USLACKBOT 2017-03-27 10:00:00

Reminder: Daily Standup Meeting!!

jakewestrip 2017-03-29 18:58:18
Hey guys, so the Database handling is a little bit more involved than I first thought. Didn't finish it last night but definitely made

progress and on track to finish it by the end of tomorrow.
I've had to stub out our Model objects as part of this, but if you want to make changes to the model you're working on just do it and I'll edit the dbHandler accordingly

USLACKBOT   2017-03-30 10:00:00

s3613240   2017-03-31 10:00:32
Final touches on the classes needed for the Authentication module. Will be able to push tonight

USLACKBOT   2017-04-03 10:00:00
Reminder: Daily Standup Meeting!!

s3613240   2017-04-03 12:07:42
Reviewing the code pushed to the repo and restructuring it into a common project structure. Integrate Jake's DB handler to the authentication module and writing some integration tests

USLACKBOT   2017-04-04 10:00:00
Reminder: Daily Standup Meeting!!

USLACKBOT   2017-04-05 10:00:00
Reminder: Daily Standup Meeting!!

s3613240   2017-04-05 10:00:49
Start integrating the different modules into one app and write integration tests

dilanifernando   2017-04-05 10:34:50
I continued working on booking form .. is it okay if I use my views for the time being ? Because our UI is not ready yet .. hopefully I will be able to get this done by tonight .. I will start working on employee class after that ..

s3613240   2017-04-05 10:36:10
The UI is ready. Download the projectUI branch and check it out. Please check my implementation. You should need the UI to write the controllers.
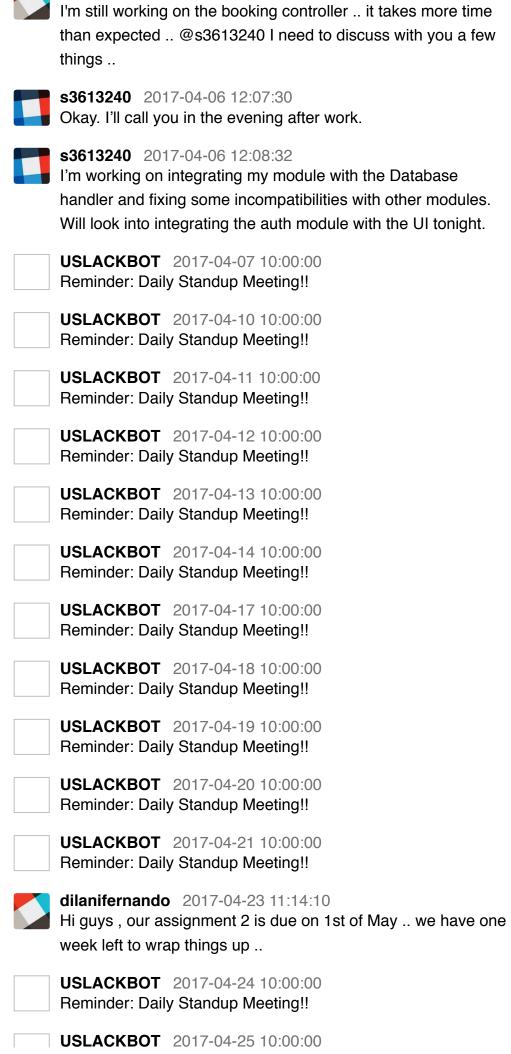

dilanifernando   2017-04-05 11:23:57
I will be on that .. thanks!!

USLACKBOT   2017-04-06 10:00:00

I'm still working on the booking controller .. it takes more time than expected .. @s3613240 I need to discuss with you a few things ..

s3613240   2017-04-06 12:07:30
Okay. I'll call you in the evening after work.

s3613240   2017-04-06 12:08:32
I'm working on integrating my module with the Database handler and fixing some incompatibilities with other modules. Will look into integrating the auth module with the UI tonight.

Working on the permission model for Auth Controller

dilanifernando   2017-04-26 15:36:59
Started working on the new booking functionalities as specified by the part B specs

dilanifernando   2017-04-26 15:43:15
@s3613240 I have fully completed customer registration, reset password, login part , according to the user type it directs to particular dashboard , error handling and everything else related to login .. I will just push the code on GitHub for ur reference .. you don't have to worry about it .. it's all done .. could you please look into employee part .. as I started working on booking part , I didn't have time to have a look at it ..

s3613979-lip   2017-04-26 16:17:33
